INDUSTRIAL MAGNETIC EQUIPMENTS

The industries that deal with metals do need various kinds of magnetic equipments to execute their processes. We are the foremost manufacturer of industrial magnetic equipments like separator, pulley, plate, rod, etc. Each type of equipment is made to carry out special purpose that suit that application area. We provide them in various dimensions to meet the needs of the client. They are offered at the most competitive price range compared to any other dealer in the market.

MAGNETIC SEPARATOR

The magnetic separator is used in number of industries to separate the ferrous impurities from the processing materials. This magnetic separator we provide is made with excellent material and precision. They are famous for their accuracy and efficiency in performance. We offer them in an extensive range according to the requirement of the industry.

Magnetic Drum Separator

MAGNETIC PULLEY

The magnetic pulley comprises of a radial magnet that is enclosed in a drum made up of stainless steel. This pulley is installed on the head of a conveyor belt to separate the ionic

components that are not required in the product. The magnetic pulley is presented in various dimensions to meet the needs of the client and their industry.

Magnetic Pulley

MAGNETIC PLATE

The magnetic plate is required in various industrial sectors that deal with metals or production of any substance. They are used to eliminate the impurities from the product that is

Plate Magnet

manufactured in the industry. The main utilization of the magnetic plate is in the food processing and metal processing industries to remove the unwanted metal from the end product.

MAGNETICS ROD

The magnetic rods are highly efficient in removing fine sized iron from the free flowing substances like ceramics, eta, flour, grains, etc. and the materials that have low moisture contents in

them. The magnetic rod we make is also used in giving final finishing to the audio speaker, hard drives and reel brakes to ensure their high quality and smooth performance.
